**PRO-FORMANCE.**

**PRO-FORMANCE**

The Pro-formance model is designed with pro-gressive surfing in mind. This high performance shortboard draws it's responsiveness from its refined low volume foil and deep single concave. This is the premier model in the Misfit range and is the most popular short-board amongst advanced surfers.

**DA GROM**

This model is for frothing groms that eat, sleep and dream surfing! Refined from nose to tail with low volume, these high performance, super light blades challenge and enable groms to go to the next level of their surfing and beyond! Da future is here groms, so stop looking and just get one!!!

**THE SHADOW**

**THE SHADOW**

Great in punchy waves and for explosive surfing, the Shaddow is designed to be ridden 2" shorter and 1/2" wider than your pro-formance board. This model has a curvy yet clean plan shape for tight turns in the pocket and smooth rail-to-rail transitions. It also combines a low entry curve and increase in tail rocker with a deep single concave for added drive and squirt off bottom hand turns.

**THE S.W.A.T**

The S.W.A.T. model is designed for attacking those small wave days while still riding a conventional shortboard outline. There is added width in the nose and tail and the entry rocker is lowered to allow easy access onto waves. A slight hip and increase in the tail rocker also allow release and pivot in turns. Order this board 1-2" shorter and 1/4" wider than your pro-formance board.

**THE DART**

The Dart is the new semi-fish that is based on the fundamentals of a high performance shortboard but with increased width in the nose and tail. The outline is curvy for explosive surfing in smaller waves and extra foam is kept to the rails for ease of paddle. These boards are designed for a thruster, quad or have the option of a 5-fin setup. Order this model approx 4" shorter and around 3/4" wider than your pro-formance board. Another one of the most popular Misfit models.

**THE NINJA**

The Ninja is the original Misfit semi-fish with a double flyer swallow as its main point of difference. The double flyer and swallow tail as standard really enable this board to pivot well and release in small to medium wave conditions. Bottom shape is also a single/ double/ vee combination. Order this model 2-4" shorter and approx. 1/2" wider than your Pro-formance board.

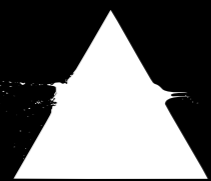

**THE SK8EY**

The Sk8ey model is the new, explosive skateboard inspired fish for the summer. The outline is similar to the original Fish but flyers, extreme double/ vee concave and a quad fin setup have been added for increased drive and squirt in critical parts of the wave. Order the SK8ey around 8-10" shorter, approx 1 1/4" wider and about 1/4" thicker than your Pro-formance board. Size range from 5'0 to 5'8.

**FISH**

The fish is designed for maximum fun in small to medium wave conditions. This model has low entry rocker and plenty of surface area for ease of paddling and planing over dead sections. Deep double concave and vee in the tail also make this board fast and maneuverable. Order the fish 4-6" shorter, 1" wider and approx. 1/8" thicker than your pro-formance board.

**SEMI-GUN**

**SEMI-GUN**

The Semi-Gun is an extension of your short board, designed for bigger waves. These boards have increased length for paddling power and are refined through the nose and tail for hold in steep, powerful faces. The bottom shape is a single/ double concave with a flat/ vee running through the tail. Order the semi-gun 4-8" longer than your pro-formance board. Also available in quad set up.

**GUN**

**THE GUN**

Shaped on the basis of where you are planning to surf, the Gun is for bigger, heavier waves that require length anywhere up to 9'6". They have increased thickness for improved paddling and a slightly tapered rail for hold in heavy conditions. The bottom shape is a combination of flat/ double and vee. Order as big as you are planning to go! Sizes range from 7'0. Also available in quad set up.

**FEEDER**

This innovative and original feeder channel concept not only looks insane but it goes amazing in a wide range of waves and boards. It has been previously shaped in anything from short boards, fishes to semi guns and is unique to the Misfit Shapes range. The feeder itself works by directing water through the the bottom of the board and away from fins giving extreme hold, drive and squirt. Order this channel with any Misfit model.

**CUSTOM BUILT**

The Misfit Custom Built board is similar to the Pro-formance model but is personalized to your requirements. Modify tails, rails, curves, concaves, rocker, foil, length, thickness or width. This model allows you to get creative and have more input into your new board.

**QUAD** - No longer a specific model, the quad can be an addition to any board to enhance or give more options to the surfer.
